SOLUTIONS
FOR THE
FUTURE**

**WILLKOMMEN to
KOLBUS Engineering!**

Founded in 1775 as a village blacksmith, Kolbus has evolved to become a leading global manufacturer of machinery for the packaging industry.

Our modern history began in 1900, when we focussed on bookbinding machines. We are known for the outstanding quality of our machines, which are used in bookbinderies all over the world. We are passionate about developing innovative and efficient solutions to help our customers produce high-quality paper and board products. Our expertise goes beyond bookbinding machinery. Over the years we have changed our portfolio and are now specialists in the manufacture of machinery for the packaging industry

Our **flexo rotary die-cutters** for corrugated packaging are well known especially in the USA and have established a solid reputation as a reliable solution for high-volume production requirements. We also offer our customers **Boxmaker machines** for on-demand production of FEFCO corrugated packaging. These machines will produce custom folding boxes as required, to deliver lower storage costs and improved production efficiency.

We are also the leading supplier of machinery and systems to produce **cases for hardcover books**. Our machines enable high-precision, fully automated production of high-quality book covers that are perfect for many applications, including notebooks with rounded corners or photo books.

In addition to our expertise in the design and manufacture of specialist machinery, we are committed to **training young people**.

We offer apprenticeships in 14 fields, giving young people the opportunity to develop their careers with a leading company in the industry.

At KOLBUS, we pride ourselves on our long heritage, **innovative solutions** and excellent **customer service**.

We look forward to meeting and working with you.
